

#### **Business Problem**

Create a New Movie Studio that Reproduces the Success of the biggest Movies at the Box Office

Analyze current movie data to find attributes of a successful movie

Generate recommendations to reproduce that success

# **Hypothesis**

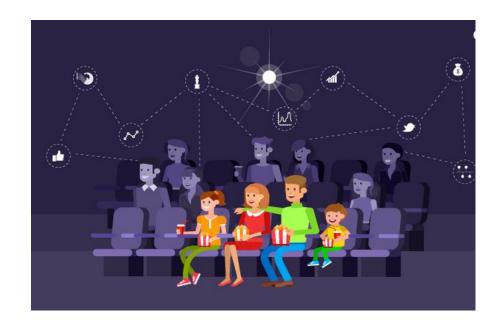

- Movies are more profitable during certain months
- Some genres are more profitable than others
- There is a production budget window that maximizes profit
- Better ratings generate higher profit returns

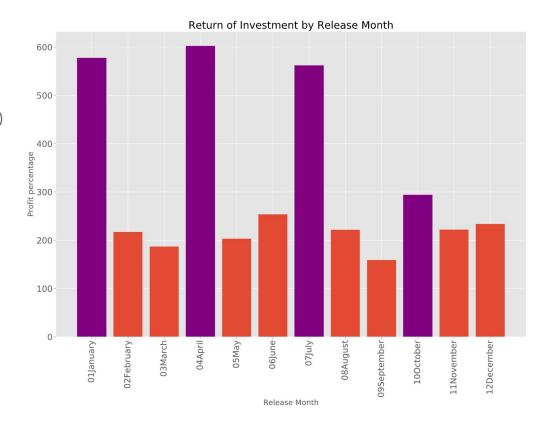

# **Data Analysis**

- Combined Production Budget and Gross data to generate profit figures
- Analyzed the relationships of our hypotheticals with profit
- Plotted and Tested our Data

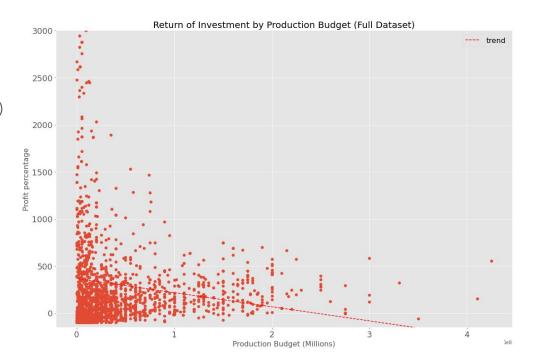

#### **Release Month**

- Release Month vs. Profit Percentage (ROI)
- Peak Release Months:
  - January
  - o April
  - July
  - October

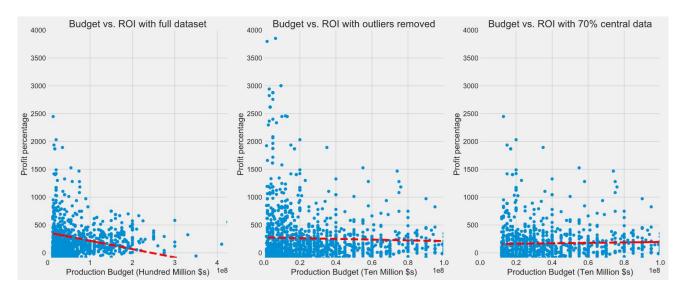

# **Production Budget**

- Production Budget vs. Profit Percentage (ROI)
- Initial results show a loss of profit as budgets increase
- Higher production budget =/= ROI

### **Production Budget**

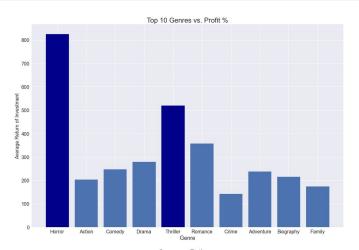

- Removed outlier data
- Found slight positive correlation between budget and profit percentage between 12 mil and 300 mil
- Likelihood of profit is higher in that window

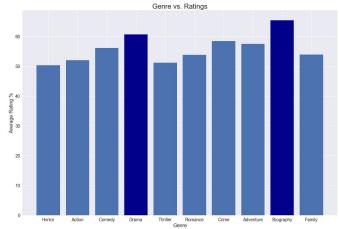

#### **Genres**

- Plotted Genre vs Profit Percentage (ROI)
  - If movie had multiple genres, movie was plotted multiple times
- More profitable movies were in the Horror and Thriller genres
- Horror movies also received the lowest ratings
  - Very small correlation between ratings and profit

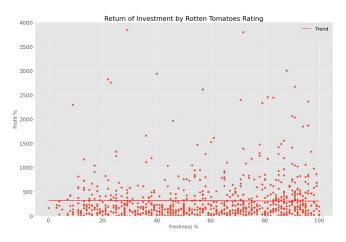

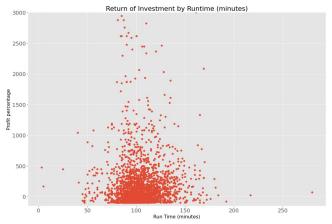

## **Ratings and Run Time**

Overall, Ratings and Run time had the least impact on profit percentage (return on investment).

Our IMDb and web scraped Rotten Tomatoes data agreed

Most movies fall between in a small window to Run Times, making the data less relevant

#### **Conclusions**

- The most profitable movies are from the Horror and Thriller genres
- The best times to release movies are in January, April and July
- The ideal production budget falls in the window of \$12mil to \$200mil
- Ratings and Run Time have very little impact on predicting successful movies
